Forensic Card Reader USB 2.0 with Write Protect

Description

This external Delock card reader powered by IOI enables you to read different memory cards and can easily be connected to a free USB port of your notebook or computer by using the included USB cable. The card reader stands out due to its write protect function, so that it is not possible to change the data on the memory card through any third-party. Furthermore this device does not leave any hints on your system, in order to except hints of read access. Thus this product is most suitable in fields of forensic, data protection or even preservation of evidence, e.g. police departments, court, etc.

Ref. 91666
